## Project Profile

### Client File Share System

IT Consultant: William A. Kibbe & Associates, Inc.

Technology: Linux, Apache HTTP Server, MySQL Database, PHP Scripting

Project Type: Information System

### Project Information

Completion Date: November 2006

William A. Kibbe & Associates provided design and development services for this Client File Share system. A Linux server is hosting this system running Apache HTTP Server, MySQL Database Server, and executing PHP scripts. Everything was developed with open source software.

This system provides the ability to share large files with clients. Unlike with email, there is no file size limit with this system. It is a great way to share large amounts of information with clients in a timely manor.

Features of this system include:

- File Uploading
- File Downloading
- File Permissions
- Download Tracking

This system was designed to be simple, yet powerful. The integration of usernames and passwords enables a level of security and allows the use of file permissions and download tracking. Once a client is logged in, the first screen they see is the list of files waiting for them to download. Clients can also use this system to send files back to employees here at Kibbe.
