Project Profile IT Management System

IT Consultant: William A. Kibbe & Associates, Inc.
 Technology: Linux, Apache HTTP Server, MySQL Database, PHP Scripting
 Project Type: Information System

Project Information

Completion Date: July 2006

William A. Kibbe & Associates provided design and development services for this IT Management system. A Linux server is the core of the system running Apache HTTP Server, MySQL Database Server, and executing PHP scripts. Everything was developed with open source software.

The system maintains all the Information Technology data for Kibbe. It tracks computers, printers, maintenance, software, and users. The relational database was designed to integrate information for customized reports.

The latest IT information is available at the click of a mouse with this system. The system also allowed Kibbe to retire multiple spreadsheets that were becoming cumbersome to manage and did not share information. A few highlights of the system are stated below:

- Hardware Inventory
- Software Inventory
- Software License Management
- Maintenance Records
- Calculate Toner Yield
- Calculate Operating Costs

Maintenance Report for HP8-STRUCT

Consumables

Description	Part Number	Average Life	Estimated Time Left	Estimated Replacement Date	Num In Stock
HP8100 Toner	C4182X	191 Days 30655 Pages	43 Days	12/25/07	2
